

Stacks, Queues & the Public/Private Divide

Quiz 01 — class syntax & data members

Name _____

Date _____

array[0] **Class Syntax**

one question

Write the **class syntax** for a `Stack` and for a `Queue`. Include **only the data members** each data structure needs to do its job — declare every member with an appropriate type.

Assume the array-based `Stack` and the linked-list `Queue` from lecture. A `Node` type may be assumed for the queue — you do *not* need to define it.

No methods. **No** constructor. **No** destructor. Just two `class` definitions with their data members declared.

// STACK

// QUEUE
