

Quiz 2

Overloaded Constructor

Name _____ Date _____ Section _____

Question Add an overloaded constructor for the Stack class.

```
class Stack {
    int *array;
    int top;

    Stack() {
        array = new int[10];
        top = -1;
    }

public:
    void push(int val) { array[++top] = val; }
};

int main() {
    Stack S;
    Stack S1(100)
}
```

Answer Write your answer below

Just write the constructor as if it were being written below the one in the class above. Don't worry about writing a complete class.
